

NEW PNEUMATIC BASE ON S 4.0

On the previous S 4.0 machines, the pneumatic distributors were LEGRIS ones. Now they are replaced by METALWORK ones which are slightly different in shape and in size.

In case of replacement of a defective LEGRIS distributor, it is compulsory to change the pneumatic base as well, in order to be able to adapt a METALWORK distributor. This change permits to keep the other LEGRIS distributors which are working good.

A special reference has been created to gather under one number all the parts required (see picture). This reference is **025575** and it includes :

- 1 MetalWork distributor, ref. **024740**,
- 1 pneumatic base, ref. **018256**,
- 6 silencers to be mount on the different distributors, ref. **019502**.

For each other LEGRIS distributor needing to be change, just add one METALWORK distributor ref. 024740.
